Subject: Forest & Wildfire

CQ348

09/06/02 04:10 PM

Let me try to explain something. Currently as it has been for generations this country has had a problem with a singular register, One Nation Under God. While it has enabled an enterprise that has been good for the people financially it has also enabled a lot of duplication. Today this duplication is happening again since President Bush gets an opportunity to select his special interest group that of course will make a profit as he deadens the old

Nonetheless he is also attempting to govern the citizens of the First Amendment Right that nonetheless do have the rights to complain as to how even the canopy of the forest are to look. Because of this I personally believe that the National Environmental Policy Act should remain the way it is since the forest can't be silenced even though it can't speak.

See what people haven't considered in this is the results of the duplication. As human beings we will duplicate or make same male or female. Nonetheless we are not alone and if our only value is secured through money or profits what will this leave us or our children but emotional difficulties since the forest can't speak and the universe is filled with sound since that is the way the Lord God enacted his creation. Anyway I urge you not to forget diversity as it really is a part of who we are.

Anyway President Bush missed an important point of NEPA that in the people, 300,000,00 people offering expression of their uniqueness one person at a time and how President Bush work took control of you through your work as he worked the properties associated with duplication.

Best Regards,

Kenneth L Christenson
